

Mobi Media Quintet24 Release

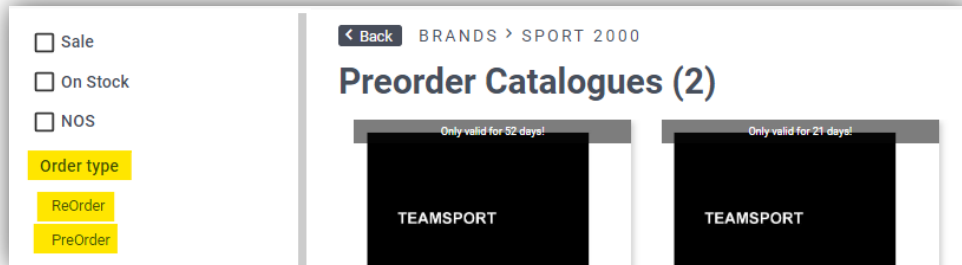

April 2024: Admin Info

1. New functions

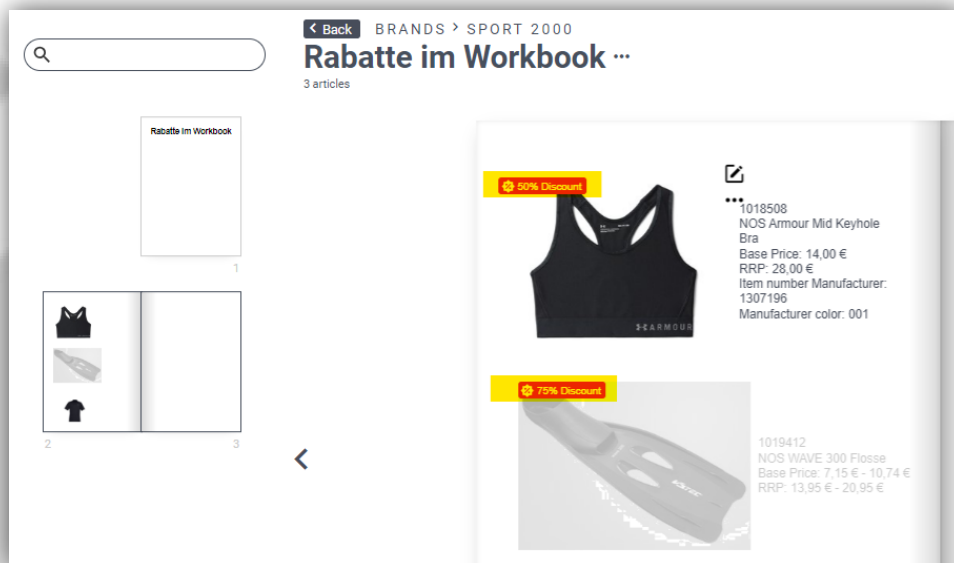

❖ Preorder / reorder filter for workbook independent article search

If you search for articles in the global search bar of your brand, you can now set a filter for preorder or reorder:

❖ Discount flag on article within assortment or workbook

If your brand has applied a discount to an article, you can identify it easily within an assortment or workbook now:

❖ Direct scanning in article details

If you work with barcodes of your brand, e.g. on fairs, it is easier now to scan the next article directly within the article detail view. Just scan an article, enter quantities within the article detail view and scan the next item without having to switch back to the article search.

2. Improvements / bugfixes

- ❖ Error when **searching within Workbook** fixed: "X" appears above the "X- icon" to delete the search query and block each other.
- ❖ **Shows** are now displayed again on the brand page.
- ❖ **Cross-workbook search**: Opening/quick entry of found articles is now possible again.

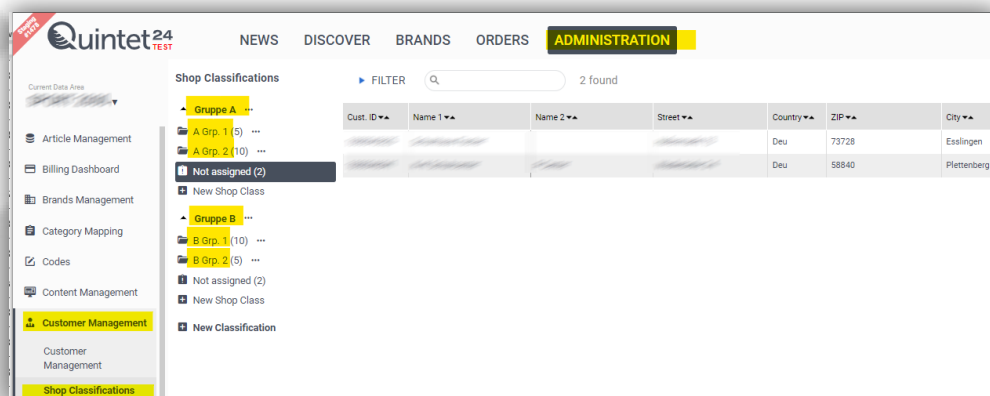

- ❖ **Sorting of brand tiles** alphabetically, but now also case insensitive, i.e. without consideration of upper/lower case in the brand name. This means that brands with lower case letters are now also sorted correctly.
- ❖ **Orders** - "Completed orders" area is now always scrollable again.
- ❖ **Export article details**: Sorting in the exported PDF is now the same as the sorting in the WB and selection of articles is taken into account during export.
- ❖ **Article unit of measure**: DB field extended to 10 digits in order to be able to transfer larger packaging units such as V1000.

3. Administration

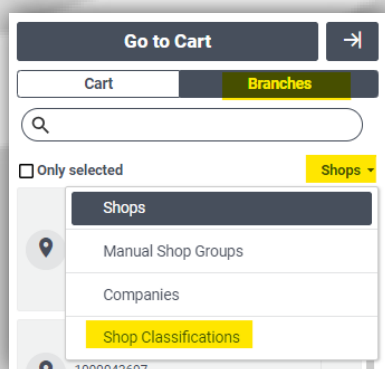

- ❖ **Add-on module: "Shop class distribution" with multi grid**

In future, retailers with several branches will be able to combine their branches into groups or classes. To make entry as convenient as possible, the store classes or stores are displayed as lines directly during entry. You can switch from the store class to the individual stores at any time so that individualization can be carried out immediately.

1. Creation of shop classes at *"Administration" / "Customer management" / "Shop classifications"*:

2. Switch in cart sidebar from *"Shops"* to *"Shop classifications"*

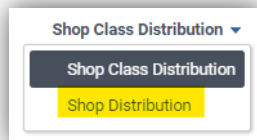

3. Record articles: Grid shows shop classes of the selected classification:

Order: Black / Black / Metallic Silver 001 ***

Shop Class Distribution

Shop Class	Branches	Sum	XS	S	M	L
A Grp. 2	10	0				
A Grp. 1	5	0				
Sum			0	0	0	0
Stocks			43	9	0	0

4. If necessary, switch to “Shop distribution” view to enter individual quantities:

Order: Black / Black / Metallic Silver 001 ***

Shop Class Distribution

Shop	Shop Class	Sum	XS	S	M	L
1000012418 Ricosta Schuhfabriken GmbH	A Grp. 1	3	3			
1000043697 GOL GmbH	A Grp. 1	3	3

1000045588 Schuhhaus Gerhard Höber GmbH	A Grp. 2	2	1	1		
1000045607 SSK Handelskonzepte GmbH	A Grp. 2	2	1	1		
1000045631 Schuh Voels	A Grp. 2	2	1	1		
Sum		25	10	0	0	0
Stocks		43	9	0	0	0

As a supplier, you can enable this functionality for your customers. If you are interested, please contact your MobiMedia sales representative.

❖ Add-on module: “Statistic”

In future, dealers will be able to make statistical evaluations about the orders they have created in Quintet:

Total			46	935,99 €	2.981,23 €	218,51%

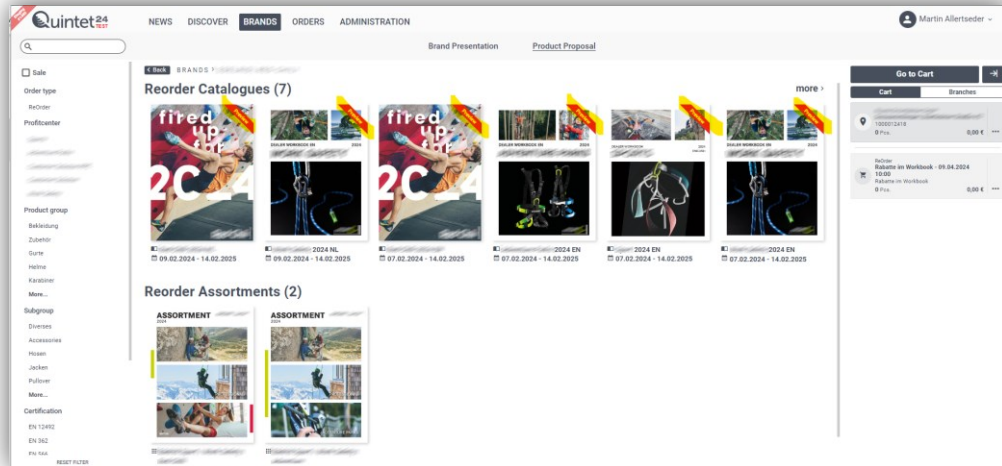

As a supplier, you can have this module activated for your dealers. If you are interested, please contact your MobiMedia sales representative.

❖ Display of unshared Workbooks

Last release brought a new feature: as an administrator, you can see all active workbooks within the workbook overview – independent, whether it was already shared with your customers or not.

This feature caused also some confusion, because if you open one of these unshared workbooks, there was no delivery address available in the cart anymore.

We have improved this functionality: now we show a new flag for unshared workbooks, to make clear that they are only visible as “preview”:

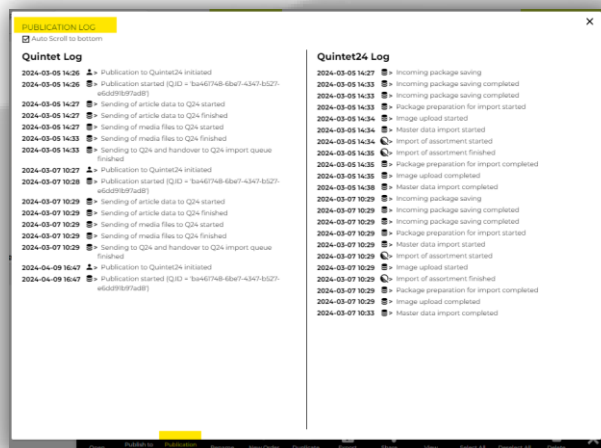

❖ Copy/move article areas

When creating an area on a workbook page that can be linked to an article, there are now some helpful improvements:

- Areas can now be dragged as a square
- Areas can be moved ex post
- The size of an area can be changed afterwards
- If an area is selected and copied, the copy is inserted slightly offset right down

❖ Workbook publication from Quintet (only important to Quintet customers)

- Publishing can now be tracked easier in order to analyze if and where problems occur. For this purpose, the individual steps of publishing on the Quintet and Quintet24 side are logged exactly.
- In future, publishing on the Quintet side will be handled via an "export task". If there are interruptions on the Quintet side, publishing will then be resumed until the task has been completed.

As changes are also required on the Quintet side to implement this functionality (new Quintet- and new MM-Server version), please contact your responsible project manager at MobiMedia!

4. Outlook:

We are currently working on the following major functions, which we want to make available during the next months:

❖ **Add-on module " Dashboard":**

We plan to build an enhancement for retailers that will allow them to create their own "dashboard" instead of the default view, where they can have more control over which brands are displayed as "favorites" and what information/indicators they want to permanently monitor as an overview.

❖ **Add-on module „One-Click-Order“:**

In future, suppliers will be able to provide complete workbooks with default quantities so that retailers can add entire packages to the shopping cart with just a few clicks. It is also possible to enter a factor that multiplies the stored default quantities accordingly. You will also receive more detailed information on this in the next update information.
