

Mobi Media Quintet24 Release

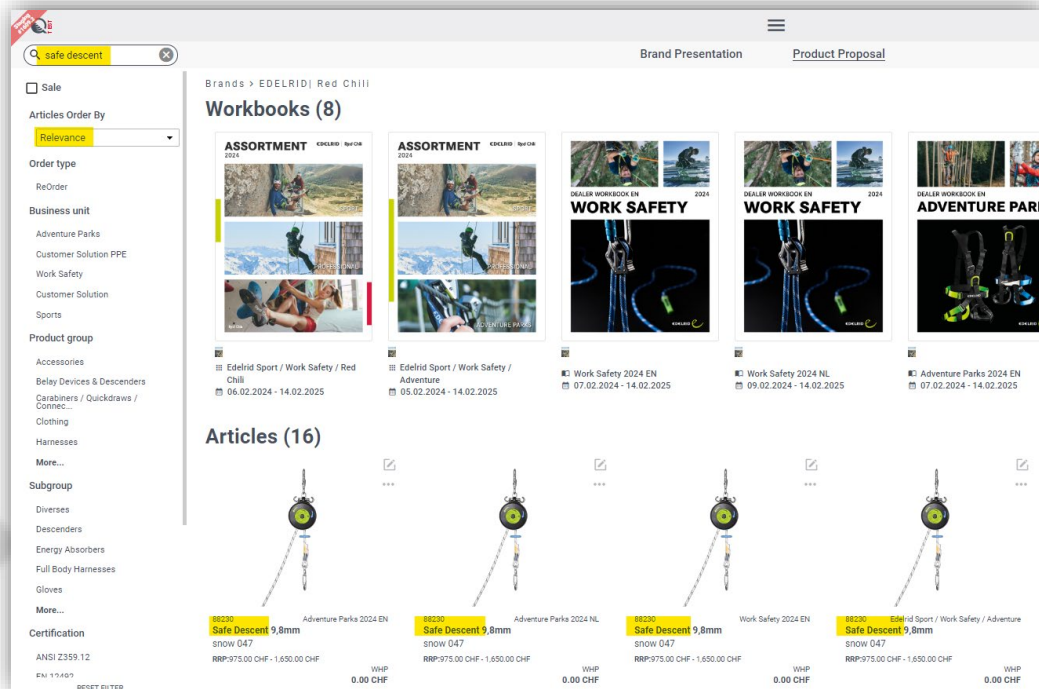

October 2024: Admin Info

1. New features

❖ Improvement of workbook-comprehensive search

The search has been significantly improved here. The results are now sorted by 'relevance', i.e. those items that best match the searched values such as item number or item description are displayed at the top.

❖ Exports:

- **Exports** will be processed faster and more reliably in future thanks to the optimisation of the resources used
- In future, **emails** will only contain links to the desired export. E-mails with attachments will no longer be sent.

After clicking on the link, you will be forwarded to this page:

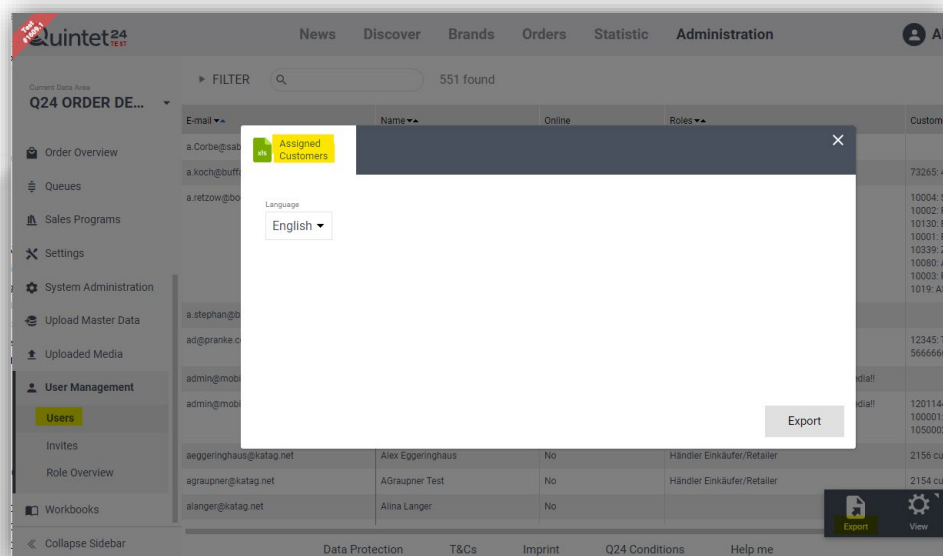

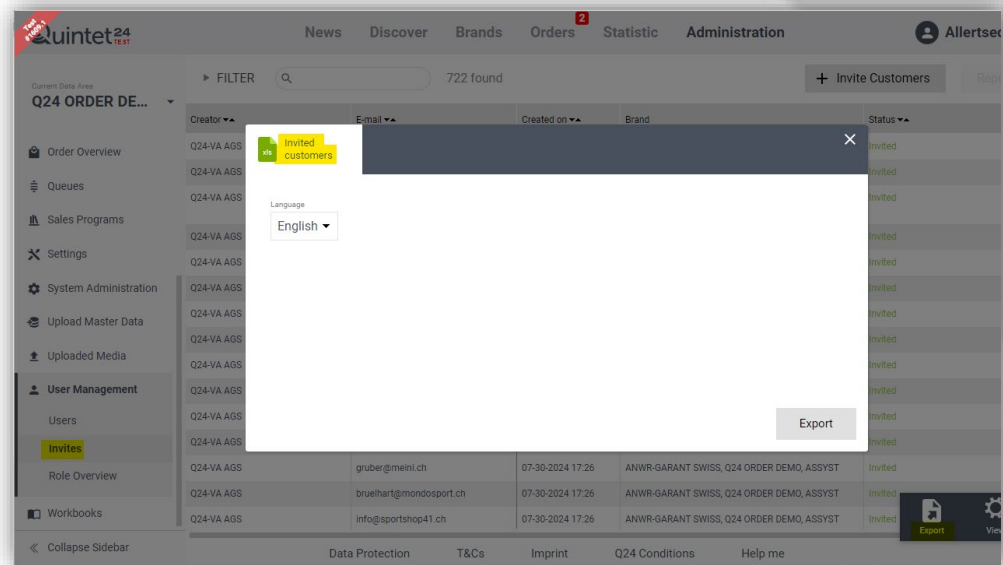

2. Improvements/Fixes

- ❖ **Exports:**
Base prices are now also hidden during export if 'Show base prices' has been deactivated.
- ❖ **App:**
 - Filter and scan button visible in brand page
 - Various layout improvements
- ❖ **Assortments:**
Optimised reloading of articles when scrolling in filtered catalogues.
- ❖ Improvement of **cookie handling** when different users log in/out on the same browser.

3. Administration

- ❖ **Administration / Users:**
 - You can now download two new reports in the **user module**:
'List of invited users' and a **'List of registered users'**

- To prevent invitations from being sent by mistake without a brand being activated, in future the invitation can only be sent if at least one brand has been ticked!
- If a user does not register using the link in the invitation email, but directly on Quintet24, the existing invitations will still be taken into account and the brands and customers will be assigned to the user

❖ **Additional module „One-Click-Order“:**

In future, suppliers will be able to provide complete workbooks with default quantities so that retailers can add entire packages to the shopping cart with just a few clicks. It is also possible to enter a multiplier that multiplies the defined default quantities accordingly. You will also receive more detailed information on this in the next update information.

This function can only be activated if you have your own domain. If you are interested, please contact our sales department.

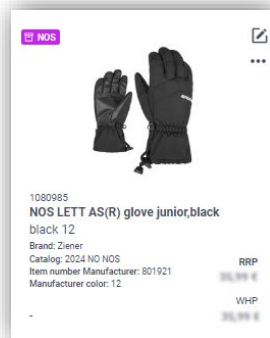

❖ **New brand specific features and filters**

The additional features described here can be activated on a brand-specific basis, but it is necessary to check in each individual case whether the required data is already available or can be made available.

In addition, the features listed here can usually only be activated if the brand has been set up via its **own domain**, as retailers will otherwise be confused by the different displays within the various brands when changing brands within the standard portal!

If you have any questions, please contact your responsible project manager or our sales department!

- **Brand area** (Workbook overview of a brand):
Further filters available for sale (discount > 0), sizes, immediately available (reorder, stock quantity > 0) and delivery date.
- **Workbook area/Assortment area:**
Further filters available for sale (discount > 0), immediately available (reorder, stock quantity > 0), sizes, base price from to, sales price from to, FEDAS/EAS, colour/colour group, gender, collection, manufacturers (for associations).
- **Assortments:**
It is possible to display additional information about the article here:
undiscounted base price, sales price, up to 6 definable dynamic article information as well as brand and catalogue for associations.

Additional search for multiple article numbers and manufacturer article numbers (associations), separated by spaces.

- **Order entry:**
 - Automatic selection of the 1st delivery date with default quantity
 - Hide stock quantity documentation#
 - Display of catalogID, catalog description and collection (associations)
 - Head office is preselected as the default delivery address (for corporate companies)
 - Display of the next incoming delivery in the vertical grid
 - EAN/GTIN display in the vertical grid

- Minimum quantities can now be controlled across all stores at colour and size level. This provides optimised support for the use of shop entry (multigrid).
 - **Branch logics:**
 - Cross-store rule fulfilment (when using the rule module)
 - Recognition of the control centre via CUSTIDCENTER = CUSTID
 - **Workbook creation:**
 - Excel-Import for workbook creation
 - „catalogue clean“ workbooks through preselection of a catalogue (associations)
 - Sharing workbooks is only possible with customers who have authorisation for the selected catalogue (associations)
 - Notes on the sharing dialogue: 'NO LOGIC FOR NEW CUSTOMERS' / 'ALSO APPLIES TO NEW CUSTOMERS'
 - **Cart view:**
 - Standard sorting of articles via article number instead of entry order
 - Display of the purchase/selling prices in the shopping basket sidebar
 - Display of the manufacturer article number and the manufacturer colour number (associations)
 - Articles can be sorted by manufacturer article number or manufacturer article colour (associations)
- ❖ **Enrichment article attributes:**
In future, dynamic signets (icons for technical/sales information) can be used in the item detail view and in assortments:

- ❖ **Automatic workbook creation from PDF**
- In future, you can generate workbooks automatically by uploading a PDF file. The only requirement is that the items in the workbook have an item number. We will then automatically compare the article number with the articles stored in the article master and link the article number to the actual article.
 - The logic has been adapted here so that a set of rules can also be stored for workbooks created from PDF documents: You can define page ranges for the defined rules to which the rules should apply. For example, you can define minimum quantities or minimum values for the defined page ranges. The retailer must then fulfil the rule as a whole for

the items originating from the page range.

❖ **Administration / catalogues:**

Workbooks and templates, as well as the category 'My/Shared Workbooks' or 'Templates' are now displayed directly in the menu.

4. Outlook

We are currently working on the following major functions:

❖ **Fast order entry:**

So that users who want to replenish their stocks quickly and have a list with EAN or article number, colour, size and quantity available can order very quickly, we want to make it possible to order directly by entering these values or uploading an Excel sheet for ordering.

❖ **New module for presentation of new features:**

To provide a better overview of the additional modules described here, we will display a 'module construction kit' that will give you information about the features. If you are interested, you can request a consultation directly from our sales department.

• **Domino imports:**

In future, article and customer master data will be imported via a tool called 'Domino'. This will replace the old system in the background (MMServers and Sysmanager). With this modern system, we are using the latest technologies, which means we expect more stability, faster imports, better scaling, improved logging and an alert system to quickly recognise and resolve problems. We are already successfully processing parts of the import such as image import, customer master and some project-specific tables in selected projects.
