

# Mobi Media Quintet24 Release

March 2025: Admin Info

## 1. New features

### ❖ Shopping cart:

#### ○ Improved visualization of the shopping cart header

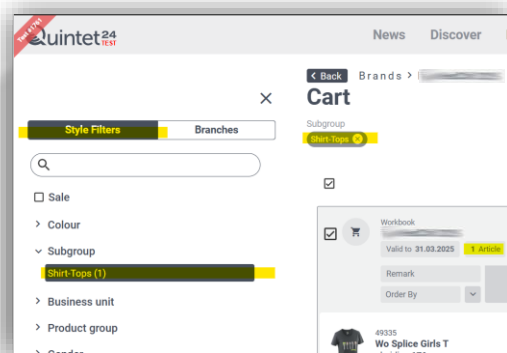

We have improved the design of the shopping cart header in the “Shopping cart” module to make it easier for you to find your way around:

- The header fields are displayed in blocks and improved visualization.
- The header remains in place when scrolling down. To gain space, however, the header information closes and opens again when scrolling upwards.

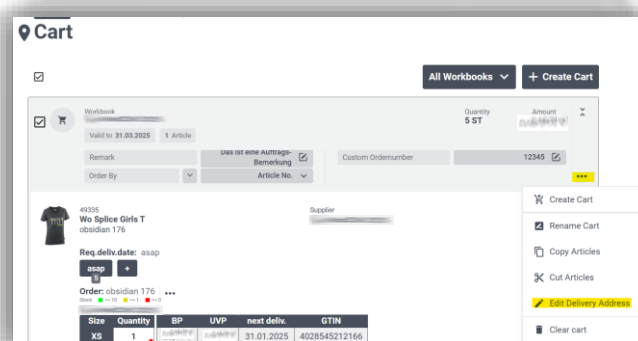

#### ○ New search, filter and sorting options in the shopping cart

We have added an additional search, filter and sort option to the left-hand sidebar so that you can find the items contained in larger shopping carts more quickly and easily. The function is identical to the filter sidebar in the assortment or catalog area.

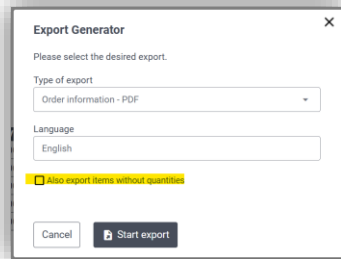

#### ○ Shopping cart module: Change delivery address

For customers with multiple delivery addresses, the delivery address can be changed in the shopping cart header in the shopping cart module via the context menu, or a one-time address can be entered.

- **Export shopping cart as PDF/Excel optionally with zero quantities**

In future, the option “with zero quantities” can be checked in the export dialog in order to be able to export items in PDF/Excel for which no quantities have been entered.

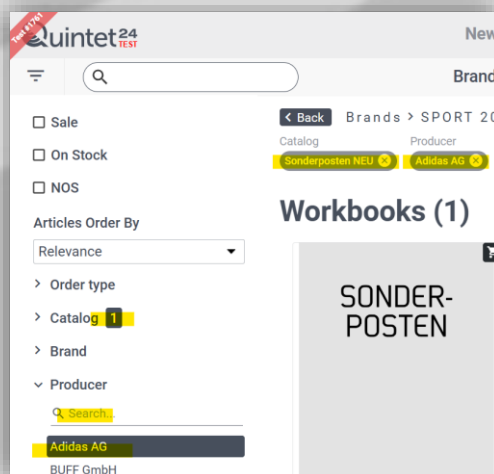

- **Sorting in the shopping cart**

If you sort articles in the shopping cart, e.g. ascending by article number, the colors will be sorted accordingly. This means that sorting is the same as sorting within assortments.

- ❖ **Improved visualization of the filter sidebar**

We have also improved the layout of the filter sidebar to make it easier to work with:

- When opening the filters, all categories are now collapsed to provide a better overview of the available filters.
- When a filter category is expanded, all items in the category are loaded.
- When scrolling, the filter category remains at the top so that it can be collapsed at any time.
- The “more” button is no longer available.
- When a filter is expanded, a search field appears below the filter category, allowing you to find the desired filter option quickly and easily.
- If a filter has been selected, the number of selected attributes is displayed after collapsing so that you can always see where a filter has been set.
- In addition, the selected filters are displayed as so-called “filter pills” with the headings of the selected attributes. By clicking on the “X” next to a filter pill, you can quickly and easily remove the individual filters again.

❖ **Order entry:**○ **Display of ordered quantities when items are viewed**

If you order an item that another user has already ordered for the same store, a note "last ordered in order portal" appears below the entry grid. If you click on it, a list of the closed orders of the last 30 days (globally adjustable) is shown in which the article was ordered, including the total quantity. When you click on an order, the order grid is displayed in a popup showing the quantities ordered at size level.

Note: This function is not available for branch/branch class orders.

**Order:** anthracite 069 ...

Stock ■  $\geq 10$  ■  $\geq 1$  ■  $\leq 0$

BP: 33,61 € UVP: 40,00 €

Size	Quantity	BP	UVP	next deliv.	GTIN
000	<input type="text"/>	<input type="text"/>	<input type="text"/>	15.07.2025	4028545137216

↕ last ordered in order portal

✕ last ordered in order portal

order date	creator		quantity	details
2025-02-14	Allertseder_Admin	5906	2	<a href="#">show</a> 📄
2025-02-11	Allertseder_Admin	5905/670	1	<a href="#">show</a> 📄

○ **IPAD order entry grid bigger**

On mobile devices (but not in the app), the entry grid can be enlarged with the pinch-to-zoom gesture (pull apart with two fingers) so that you can make your entries more easily.

❖ **APP: automatic suggestion of the app when opening Q24 in the browser on iOS/iPhone**

When Q24 is opened in the browser on an iPhone, a pop-up appears informing the user that there is a corresponding Q24 app that facilitates access to Q24.

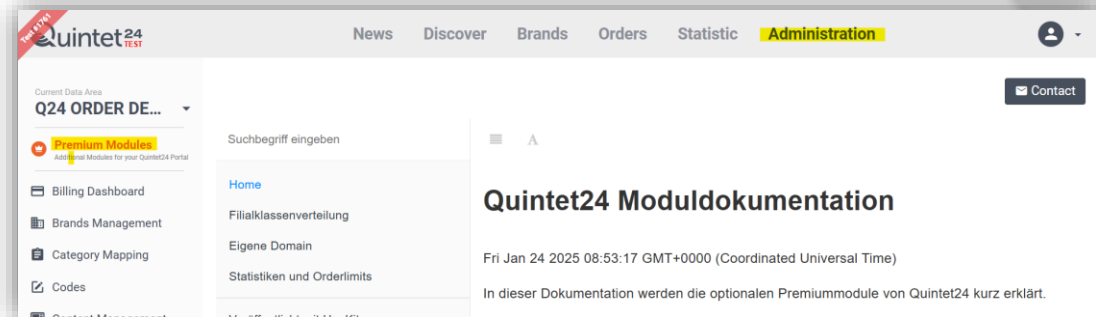

## 2. Improvements

- ❖ **Update of changed delivery address from master data** is now also displayed correctly for shopping carts.
- ❖ **Error message when downloading an order as XLSX in Edge:** Edge wanted to open Excel immediately. If the user did not allow this in the local browser, only a mysterious URL was shown. Now the Excel file is also downloaded normally as a file in Edge and the user can decide what to open it with.
- ❖ Improvements to the **rulebook**
- ❖ **APP:** Improvements in the article visualization and scanning

### 3. Administration

#### ❖ Q24 Construction kit module

A new module “Premium modules in Q24” allows you as an administrator to view additionally available modules in Q24. If you are interested, you will find information here about the modalities of activation and can simply contact our sales department.

#### ❖ Shopping cart Header comment can be activated per brand and length can be controlled.

#### ❖ New Excel evaluation “Order evaluation - Excel”

A new export function is available in Administration / Order overview. The shopping carts selected via the filter function, including the items they contain, are exported in an Excel list.

#### ❖ T&Cs/Data protection policy (DPP) can be switched off on a brand-specific basis

If your brand already has a procedure for obtaining your consent to the GTCs and data protection policy as well as changes to these documents, you do not need to confirm the T&Cs and DPP when approving a shopping cart. Although the options for confirmation are retained, they are pre-ticked so that you no longer need to do anything here. However, you can still open and view the T&C and DPP by clicking on the corresponding links. If you uncheck the boxes to indicate that you do not agree with one or both provisions, the shopping cart will still not be released. In this case, you must contact the customer service of your brand and clarify the questions/problems regarding the T&C/DPP.

☒ Request confirmation of TAC/DSGVO when concluding orders

#### No longer request TAC/DSGVO when concluding orders

If you wish to waive the confirmation of the TAC/DSGVO each time you complete a shopping cart, you must ensure that all your merchants are presented with your TAC/DSGVO, as well as changes to them, for confirmation in another way. MobiMedia, as the operator of Quintet24, has no influence on this and assumes no responsibility for the accuracy of your TACs/DSGVO or the process by which you make them known to your merchants and have their acceptance documented. In case of doubt, we recommend that you continue to have the TAC/DSGVO documented each time you conclude an order!

## New features for domains

### ❖ Brand logo top left without Q24 logo

To make the brand logo stand out better when using your own domain, the Q24 logo is hidden at the top left and the entire space is used for the brand logo.

### ❖ Modification of menu bar in B2B style

For individual domains, it will in future be possible to hide the tab “Brands” and display the menu items “Brand presentation”, “Product proposal” and any individual menu items created, such as “Downloads”, in the top menu bar.

However, this only makes sense if there is only one brand within the domain

### ❖ Immediate opening of product list

If a supplier has only shared a single assortment or workbook with its retailers, it can be opened immediately after logging in.

### ❖ Order information with your own brand logo

For domains, a brand logo can also be stored for the printout of the order information. The Q24 logo will then be replaced by the brand logo in the PDF.

### ❖ Possibility to rename “delivery date” and “immediately” to be brand-specific (e.g. “customer requested date” and “as soon as possible”).

In the article detail view/quick order entry and exports, the above terms can be adapted to avoid confusion for retailers.

### ❖ Sending emails from domain with domain sender

E-mails that are sent from a domain can be sent with the sender's address of the domain that also contains the brand: [donotreply@\[brandname\].quintet24.com](mailto:donotreply@[brandname].quintet24.com) instead of the sender's address “donotreply@quintet24.com”, so that the recipients can better establish the connection to the brand/association and the e-mails are not so easily marked as SPAM and ignored.

### ❖ SSO

It is possible to set up a single sign-on within a domain, which makes it possible to jump directly from an association portal to Q24 without additional login. However, the possibility of implementation must be checked individually for each association, as it also depends on the procedure used by your provider.

### ❖ Tracking module in Q24

The activities of brand admins can be tracked for each brand: Login date, date the brand tile was changed, date and content of the last data upload. You can filter by time period, brands and customer groups.

## Improvements/Bugfixes

- ❖ **Invoice overview** now shows the correct currency-dependent values.β
- ❖ **Customer data export** as CSV now also works if filters have been set.

## 4. Outlook

We are currently working on the following major functions:

- **Domino imports:**  
In future, article and customer master data will be imported via a new “Domino” importer. This will replace the old system in the background (MMServer and Sysmanager). With this modern system, we are using the latest technologies, which means we expect more stability, faster imports, better scaling, improved logging and an alert system to quickly identify and resolve problems. We are already successfully processing parts of the import such as image import, customer master and some project-specific tables in selected projects. You can monitor the imports from Quintet24 and start them manually if required.
- **Integration of Evolution budget planning in Q24**
